

GEOCOMM GIS SERVICE PACKAGE OFFERINGS

GeoComm offers three different GIS Service Package Offerings for on-going GIS data remediation, normalization, and maintenance. The packages provide local governments with a straight forward path to begin their NG9-1-1 preparation or prepare their data for other 9-1-1 systems such as Computer Aided Dispatch (CAD).

The GIS Service Package Offerings available are:

Basic GIS Service Package: This package meets the minimum required levels for NG9-1-1 functionality for geospatial call routing the customer’s GIS data. When complete, your GIS data will be updated to satisfy Computer Aided Dispatch (CAD) and 9-1-1 mapping system requirements.

Standard GIS Service Package: This package includes everything listed in the Basic Package Offering with the addition of reviewing or updating several additional GIS data layers. This package not only meets NENAs minimum NG9-1-1 GIS requirements, but also their strongly recommended requirements for GIS data.

Premium GIS Service Package: This package reviews all of the items included in the Basic and Standard package Offerings as well as several other upgraded GIS data layers. Our Premium Package meets all of the required and recommended NENA NG9-1-1 GIS requirements and is enhanced by including three years of ongoing GIS data maintenance and CAD data provisioning.

	Basic	Standard	Premium
NENA’s required layers for NG9-1-1	✓	✓	✓
NENA’s strongly recommended layers for NG9-1-1		✓	✓
On-going GIS maintenance			✓

All three of these comprehensive GIS Service Packages offer optional services and support our customers quest to achieve mission critical GIS data showing accurate location information. Through these offerings local, regional, and statewide agencies can improve the GIS data present in NG9-1-1 environments and comply with nationally recognized public safety standards.
